

## Remove Frozen Bleeder Screws like a Pro...Easily

### Introducing the new Bleeder Buster Tool Kit

No more heating up  
No more drilling and tapping

No more bashing  
No more cursing

- Can save you a lot of time.
- Pays for itself very quickly.
- Works on both cast iron and aluminum.

It is as simply as 1, 2, 3. Works every time

1. Place filler wire into end of bleeder and cut to length.
2. Install tool into your air chisel and shock bleeder from the top
3. Unscrew bleed screw with conventional tool

**How does it work?** Installing the wire into the bleeder prevents the walls of the bleeder from collapsing. Applying shock to the bleeder for about three to four seconds case hardens the bleeder and shocks the threads.
