The OE Rubber Brake Hose Program

Can replicate most OE brake and clutch hoses using OE design fittings that comply to DOT standards - usually while the customer waits. Hoses can be made for any type of vehicle with hydraulic brakes - from motorcycles to industrial equipment.

The BrakeQuip Tool Program

BrakeQuip offers a range of unique speciality tools that are highly productive for the automotive plumbing industry.

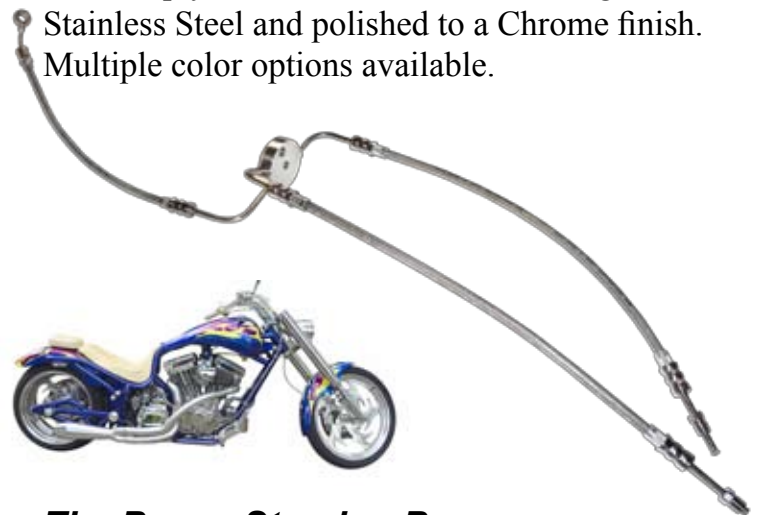

The Stainless Steel Braided Brake Hose Program

Can replicate most OE brake and clutch hoses with stainless braided hose that complies to DOT standards - usually while the customer waits. The fittings used are the same as the rubber brake hoses so there is no duplication of fitting inventory or equipment.

The Motorcycle Program

Can replicate most Harley Davidson brake lines that comply with DOT standards. Fittings are Stainless Steel and polished to a Chrome finish. Multiple color options available.

The Metal Tube Program

Duplicate any automotive metal tube instantly and profitably using the BrakeQuip EziBend tube and the BrakeQuip high speed flaring tool. Tubes can be made while the customer waits.

The Power Steering Program

Repair automotive power steering hoses using the highest OEM quality hose available. Choose braze on or compression fittings and hose that incorporates noise resistant technology.
